

Panton Cubes

Verner Panton, 1974

vitra.

Panton Cubes constitute a modular system that allows the creation of sculptural animals or abstract objects. It consists of cubic frame elements that are connected with clips and fitted with panels.

Designed in 1975, the system was utilised by Verner Panton to form a wide variety of figures. The re-edition of the Panton Cubes by Vitra, developed in collaboration with Verner Panton Design AG, includes kits for a Duck, Flamingo, Giraffe

and Cat. Each kit contains the elements needed to create the respective animal figure – yet as there is no limit to the imagination, countless other ideas can also be brought to life.

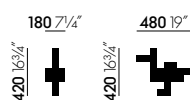

The kits are each available in a duo-tone colour combination or with a chrome finish.

- **Materials:** frame elements and panels made of recycled ABS plastic (post-industrial), panels with coloured or chrome finish.
- **Note:** not a toy.
